

Exhibit B

Mobile Station-Base Station Compatibility Standard for Dual-Mode Spread Spectrum Systems

SP-3693-1 (to be published as TIA/EIA-95-B)

Publish Version

October 31, 1998

PREFACE

1 These technical requirements form a compatibility standard for 800 MHz cellular mobile
2 telecommunications systems and 1.8 to 2.0 GHz Code Division Multiple Access (CDMA)
3 Personal Communications Services (PCS) systems. They ensure that a mobile station can
4 obtain service in a cellular or PCS system manufactured according to this standard. These
5 requirements do not address the quality or reliability of that service, nor do they cover
6 equipment performance or measurement procedures.

7 To ensure compatibility (see Note 1), both radio-system parameters and call-processing
8 procedures must be specified. The sequence of call-processing steps that the mobile
9 stations and base stations execute to establish calls has been specified along with the
10 digital control messages and analog signals that are exchanged between the two stations.

11 The base station is subject to fewer compatibility requirements than the dual-mode mobile
12 station. Radiated power levels, both desired and undesired, are fully specified for dual-
13 mode mobile stations to control the RF interference that one mobile station can cause
14 another. Base stations are fixed in location and their interference is controlled by proper
15 layout and operation of the system in which the station operates. Detailed call-processing
16 procedures are specified for mobile stations to ensure a uniform response to all base
17 stations. Base station call procedures are not specified in detail because they are a part of
18 the overall design of the individual land system. However, the base station call-processing
19 procedures must be compatible with those specified for the mobile station. This approach
20 to writing the compatibility specification provides the land system designer with sufficient
21 flexibility to respond to local service needs and to account for local topography and
22 propagation conditions.

23 This specification includes provisions for future service additions and expansion of system
24 capabilities.

11	(TMSI) Assignment	6-114
12	6.3.12.1.11 Authentication of PACA Cancellation	6-115
13	6.3.12.2 Signaling Message Encryption	6-116
14	6.3.12.3 Voice Privacy	6-117
15	6.3.13 Lock and Maintenance Required Orders	6-117
16	6.3.14 Mobile Station Revision Identification	6-118
17	6.3.15 Temporary Mobile Station Identity.....	6-118
18	6.3.15.1 Overview	6-118
19	6.3.15.2 TMSI Assignment Memory	6-119
20	6.4 Supervision	6-120
21	6.4.1 Pilot Channel	6-120
22	6.4.2 Sync Channel.....	6-120
23	6.4.3 Paging Channel.....	6-120
24	6.4.4 Forward Traffic Channel.....	6-121
25	6.4.5 Accumulated Statistics.....	6-122
26	6.4.5.1 Accumulated Access Channel Statistics.....	6-122
27	6.4.5.2 Accumulated Reverse Traffic Channel Statistics.....	6-123
28	6.4.5.3 Accumulated Paging Channel Statistics	6-128
29	6.4.5.4 Accumulated Forward Traffic Channel Statistics.....	6-129
30	6.4.5.5 Accumulated Layer Two Statistics	6-134
31	6.4.5.6 Other Monitored Quantities and Statistics.....	6-135
32	6.5 Malfunction Detection.....	6-135

CONTENTS

1	6.5.1 Malfunction Timer	6-135
2	6.5.2 False Transmission	6-135
3	6.5.3 Response to Base Station Orders	6-135
4	6.6 Call Processing	6-137
5	6.6.1 Mobile Station Initialization State	6-139
6	6.6.1.1 System Determination Substate	6-141
7	6.6.1.1.1 Custom System Selection Process	6-146
8	6.6.1.1.2 System Selection Using Current Redirection Criteria	6-147
9	6.6.1.1.3 System Selection Using System Reselection Criteria	6-148
10	6.6.1.1.4 Acquiring the Selected System	6-149
11	6.6.1.2 Pilot Channel Acquisition Substate	6-149
12	6.6.1.3 Sync Channel Acquisition Substate	6-149
13	6.6.1.4 Timing Change Substate	6-151
14	6.6.2 Mobile Station Idle State	6-152
15	6.6.2.1 Idle Procedures	6-154
16	6.6.2.1.1 Paging Channel Monitoring Procedures	6-154
17	6.6.2.1.1.1 General Overview	6-154
18	6.6.2.1.1.1.1 General Overview for Individually Addressed Messages	6-154
19	6.6.2.1.1.1.2 General Overview for Broadcast Messages	6-156
20	6.6.2.1.1.1.2.1 Method 1: Multi-Slot Broadcast Message Transmission	6-157
21	6.6.2.1.1.1.2.2 Method 2: Periodic Broadcast Paging	6-157
22	6.6.2.1.1.2 Non-Slotted Mode Requirements	6-158
23	6.6.2.1.1.3 Slotted Mode Requirements	6-158
24	6.6.2.1.1.3.1 Monitoring Assigned Slots	6-158
25	6.6.2.1.1.3.2 Determination of the Slot Cycle Index	6-160
26	6.6.2.1.1.3.3 Slot Cycles for Broadcast Paging	6-160
27	6.6.2.1.1.3.4 Monitoring Paging Channel Broadcasts	6-161
28	6.6.2.1.1.3.5 Support of Broadcast Delivery Options	6-161
29	6.6.2.1.2 Acknowledgment Procedures	6-161
30	6.6.2.1.3 Registration	6-164
31	6.6.2.1.4 Idle Handoff	6-164
32	6.6.2.1.4.1 Pilot Search	6-164

CONTENTS

1	6.6.2.1.4.2 Idle Handoff Procedures	6-166
2	6.6.2.1.5 Address Recognition for Other than the General Page Message.....	6-168
3	6.6.2.1.5.1 ESN Addressed Messages	6-168
4	6.6.2.1.5.2 IMSI Addressed Messages	6-168
5	6.6.2.1.5.3 TMSI Addressed Messages	6-169
6	6.6.2.1.5.4 Broadcast Addressed Messages	6-170
7	6.6.2.1.6 System Reselection Procedures	6-170
8	6.6.2.2 Response to Overhead Information Operation	6-171
9	6.6.2.2.1 System Parameters Message	6-173
10	6.6.2.2.1.1 Stored Parameters	6-173
11	6.6.2.2.1.2 Paging Channel Assignment Change	6-176
12	6.6.2.2.1.3 RESCAN Parameter	6-176
13	6.6.2.2.1.4 Roaming Status	6-176
14	6.6.2.2.1.5 Registration	6-176
15	6.6.2.2.1.6 Slot Cycle Index	6-176
16	6.6.2.2.1.7 PACA Disable for SID Change	6-176
17	6.6.2.2.2 Access Parameters Message	6-177
18	6.6.2.2.3 Neighbor List Message	6-178
19	6.6.2.2.4 CDMA Channel List Message	6-179
20	6.6.2.2.5 Extended System Parameters Message	6-180
21	6.6.2.2.6 Global Service Redirection Message	6-183
22	6.6.2.2.7 Extended Neighbor List Message	6-183
23	6.6.2.2.8 General Neighbor List Message	6-185
24	6.6.2.3 Mobile Station Page Match Operation	6-187
25	6.6.2.4 Mobile Station Order and Message Processing Operation	6-191
26	6.6.2.5 Mobile Station Origination Operation	6-199
27	6.6.2.6 Mobile Station Message Transmission Operation	6-199
28	6.6.2.7 Mobile Station Power-Down Operation	6-199
29	6.6.2.8 Mobile Station PACA Cancel Operation	6-199
30	6.6.3 System Access State	6-200
31	6.6.3.1 Access Procedures	6-201
32	6.6.3.1.1 Access Attempts	6-201

CONTENTS

1	6.6.3.1.1.1 Overview	6-201
2	6.6.3.1.1.2 Requirements	6-208
3	6.6.3.1.2 Acknowledgment Procedures	6-210
4	6.6.3.1.3 Handoffs	6-211
5	6.6.3.1.3.1 Pilot Search	6-211
6	6.6.3.1.3.2 Access Handoff	6-211
7	6.6.3.1.3.3 Access Probe Handoff	6-213
8	6.6.3.1.4 System Access State Exit Procedures	6-214
9	6.6.3.1.5 Access Channel Address Composition	6-214
10	6.6.3.1.6 Full-TMSI Timer	6-217
11	6.6.3.1.7 Reporting Pilots	6-217
12	6.6.3.1.7.1 Generation of the Initial Access Handoff List	6-217
13	6.6.3.1.7.2 Update of the Access Handoff List	6-218
14	6.6.3.1.7.3 Generation of the Other Reported List	6-218
15	6.6.3.1.7.4 Update of the Other Reported List	6-219
16	6.6.3.1.7.5 Setting of Pilot Reporting Fields in Access Channel Messages	6-219
17	6.6.3.2 Update Overhead Information Substate	6-220
18	6.6.3.3 Page Response Substate	6-222
19	6.6.3.4 Mobile Station Order/Message Response Substate	6-236
20	6.6.3.5 Mobile Station Origination Attempt Substate	6-239
21	6.6.3.6 Registration Access Substate	6-257
22	6.6.3.7 Mobile Station Message Transmission Substate	6-262
23	6.6.3.8 PACA Cancel Substate	6-266
24	6.6.4 Mobile Station Control on the Traffic Channel State	6-269
25	6.6.4.1 Special Functions and Actions	6-271
26	6.6.4.1.1 Forward Traffic Channel Power Control	6-271
27	6.6.4.1.1.1 Forward Traffic Channel Power Control Initialization	6-271
28	6.6.4.1.1.2 Processing the Power Control Parameters Message	6-272
29	6.6.4.1.2 Service Configuration and Negotiation	6-272
30	6.6.4.1.2.1 Use of Variables	6-276
31	6.6.4.1.2.1.1 Maintaining the Service Request Sequence Number	6-276
32	6.6.4.1.2.1.2 Maintaining the Service Negotiation Indicator Variable	6-276

CONTENTS

1	6.6.4.1.2.1.3 Maintaining the Service Option Request Number	6-276
2	6.6.4.1.2.2 Service Subfunctions	6-276
3	6.6.4.1.2.2.1 Normal Service Subfunction	6-279
4	6.6.4.1.2.2.2 Waiting for Service Request Message Subfunction	6-280
5	6.6.4.1.2.2.3 Waiting for Service Response Message Subfunction	6-282
6	6.6.4.1.2.2.4 Waiting for Service Connect Message Subfunction	6-285
7	6.6.4.1.2.2.5 Waiting for Service Action Time Subfunction	6-286
8	6.6.4.1.2.2.6 SO Negotiation Subfunction	6-288
9	6.6.4.1.3 Acknowledgment Procedures	6-290
10	6.6.4.1.3.1 Messages Requiring Acknowledgment	6-290
11	6.6.4.1.3.1.1 Transmitting Messages and Receiving Acknowledgments	6-290
12	6.6.4.1.3.1.2 Receiving Messages and Returning Acknowledgments	6-292
13	6.6.4.1.3.2 Messages Not Requiring Acknowledgment	6-293
14	6.6.4.1.3.3 Acknowledgment Procedures Reset	6-294
15	6.6.4.1.4 Processing the In-Traffic System Parameters Message	6-294
16	6.6.4.1.5 Message Action Times	6-295
17	6.6.4.1.6 Long Code Transition Request Processing	6-296
18	6.6.4.1.7 Power Up Function (PUF)	6-296
19	6.6.4.1.7.1 Processing the Power Up Function Message	6-297
20	6.6.4.1.7.2 Power Up Function Procedures	6-298
21	6.6.4.1.7.2.1 PUF Probe On Serving Frequency	6-299
22	6.6.4.1.7.2.2 PUF Probe On PUF Target Frequency	6-299
23	6.6.4.1.7.3 Processing the Power Up Function Completion Message	6-300
24	6.6.4.2 Traffic Channel Initialization Substate	6-301
25	6.6.4.3 Alerting	6-305
26	6.6.4.3.1 Waiting for Order Substate	6-305
27	6.6.4.3.2 Waiting for Mobile Station Answer Substate	6-311
28	6.6.4.4 Conversation Substate	6-317
29	6.6.4.5 Release Substate	6-324
30	6.6.5 Registration	6-329
31	6.6.5.1 Forms of Registration	6-329
32	6.6.5.1.1 Power-Up Registration	6-330

CONTENTS

1	6.6.5.1.2 Power-Down Registration	6-331
2	6.6.5.1.3 Timer-Based Registration	6-331
3	6.6.5.1.4 Distance-Based Registration	6-331
4	6.6.5.1.5 Zone-Based Registration	6-332
5	6.6.5.1.6 Parameter-Change Registration.....	6-334
6	6.6.5.1.7 Ordered Registration.....	6-335
7	6.6.5.1.8 Implicit Registration.....	6-335
8	6.6.5.1.9 Traffic Channel Registration.....	6-335
9	6.6.5.2 Systems and Networks.....	6-335
10	6.6.5.3 Roaming	6-336
11	6.6.5.4 Registration Timers and Indicators.....	6-337
12	6.6.5.5 Registration Procedures	6-338
13	6.6.5.5.1 Actions in the Mobile Station Initialization State.....	6-338
14	6.6.5.5.1.1 Power-Up or Change to a Different Operating Mode, Band Class, Serving System, or PCS Frequency Block	6-338
15	6.6.5.5.1.2 Timer Maintenance	6-338
16	6.6.5.5.1.3 Entering the Mobile Station Idle State	6-338
17	6.6.5.5.2 Actions in the Mobile Station Idle State	6-339
18	6.6.5.5.2.1 Idle Registration Procedures	6-339
19	6.6.5.5.2.2 Processing the Registration Fields of the System Parameters Message	6-340
20	6.6.5.5.2.3 Ordered Registration	6-341
21	6.6.5.5.2.4 Power Off	6-341
22	6.6.5.5.2.5 Full-TMSI Timer Expiration	6-341
23	6.6.5.5.3 Actions in the System Access State	6-341
24	6.6.5.5.3.1 Successful Access, Registration, or Implicit Registration.....	6-341
25	6.6.5.5.3.2 Unsuccessful Access	6-343
26	6.6.5.5.3.3 Power Off	6-344
27	6.6.5.5.4 Actions in the Mobile Station Control on the Traffic Channel State	6-344
28	6.6.5.5.4.1 Traffic Channel Initialization	6-344
29	6.6.5.5.4.2 Timer Maintenance	6-345
30	6.6.5.5.4.3 Processing the Mobile Station Registered Message.....	6-345

CONTENTS

1	6.6.5.5.4.4 Power Off	6-346
2	6.6.6 Handoff Procedures.....	6-346
3	6.6.6.1 Overview	6-347
4	6.6.6.1.1 Types of Handoff.....	6-347
5	6.6.6.1.2 Pilot Sets	6-347
6	6.6.6.2 Requirements	6-348
7	6.6.6.2.1 Pilot Search.....	6-348
8	6.6.6.2.2 Pilot Strength Measurements	6-350
9	6.6.6.2.3 Handoff Drop Timer.....	6-350
10	6.6.6.2.4 Pilot PN Phase	6-352
11	6.6.6.2.5 Handoff Messages.....	6-352
12	6.6.6.2.5.1 Processing of Forward Traffic Channel Handoff Messages.....	6-352
13	6.6.6.2.5.2 Processing of Reverse Traffic Channel Handoff Messages.....	6-380
14	6.6.6.2.6 Set Maintenance	6-383
15	6.6.6.2.6.1 Maintenance of the Active Set	6-383
16	6.6.6.2.6.2 Maintenance of the Candidate Set.....	6-383
17	6.6.6.2.6.3 Maintenance of the Neighbor Set	6-384
18	6.6.6.2.7 Soft Handoff	6-385
19	6.6.6.2.7.1 Forward Traffic Channel Processing	6-385
20	6.6.6.2.7.2 Reverse Traffic Channel Power Control During Soft Handoff	6-385
21	6.6.6.2.7.3 Starting Periodic Search following Soft Handoff.....	6-385
22	6.6.6.2.8 CDMA-to-CDMA Hard Handoff.....	6-386
23	6.6.6.2.8.1 Hard Handoff without Return on Failure	6-386
24	6.6.6.2.8.2 Hard Handoff with Return on Failure	6-387
25	6.6.6.2.8.2.1 Restoring the Configuration.....	6-391
26	6.6.6.2.8.3 Search of Pilots on the CDMA Candidate Frequency	6-393
27	6.6.6.2.8.3.1 CDMA Candidate Frequency Single Search.....	6-393
28	6.6.6.2.8.3.2 Candidate Frequency Periodic Search.....	6-394
29	6.6.6.2.8.3.3 Candidate Frequency Pilot Measurements	6-397
30	6.6.6.2.8.3.4 Aborting CDMA Candidate Frequency Periodic Search.....	6-399
31	6.6.6.2.9 CDMA-to-Analog Handoff.....	6-399
32	6.6.6.2.10 Search of Analog Frequencies	6-400

CONTENTS

1	6.6.6.2.10.1 Analog Frequencies Single Search	6-400
2	6.6.6.2.10.2 Analog Frequencies Periodic Search.....	6-401
3	6.6.6.2.10.3 Analog Frequency Measurements	6-403
4	6.6.6.2.10.4 Aborting Analog Frequencies Periodic Search.....	6-405
5	6.6.6.2.11 Processing of Reverse Supplemental Code Channels.....	6-405
6	6.6.6.2.12 Periodic Serving Frequency Pilot Report Procedure	6-405
7	6.6.6.3 Examples	6-407
8	6.6.7 Hash Functions and Randomization	6-412
9	6.6.7.1 Hash Function.....	6-412
10	6.6.7.2 Pseudorandom Number Generator	6-413
11	6.6.8 CODE_CHAN_LIST _s Maintenance	6-413
12	6.7 Signaling Formats	6-417
13	6.7.1 Access Channel	6-417
14	6.7.1.1 Access Channel Structure.....	6-417
15	6.7.1.2 Access Channel Message Structure.....	6-420
16	6.7.1.2.1 Access Channel MSG_LENGTH Field.....	6-420
17	6.7.1.2.2 Access Channel Message CRC.....	6-421
18	6.7.1.3 Access Channel Message Body Format.....	6-423
19	6.7.1.3.1 Common Fields	6-423
20	6.7.1.3.1.1 Common Layer 2 and Identification Fields	6-423
21	6.7.1.3.1.2 Common Authentication Fields.....	6-432
22	6.7.1.3.1.3 Common Pilot Measurement Fields.....	6-433
23	6.7.1.3.2 Message Body Contents.....	6-435
24	6.7.1.3.2.1 Registration Message.....	6-436
25	6.7.1.3.2.2 Order Message	6-441
26	6.7.1.3.2.3 Data Burst Message	6-444
27	6.7.1.3.2.4 Origination Message.....	6-448
28	6.7.1.3.2.5 Page Response Message.....	6-457
29	6.7.1.3.2.6 Authentication Challenge Response Message.....	6-462
30	6.7.1.3.2.7 Status Response Message.....	6-465
31	6.7.1.3.2.8 TMSI Assignment Completion Message.....	6-467
32	6.7.1.3.2.9 PACA Cancel Message	6-470

CONTENTS

1	6.7.1.3.2.10 Extended Status Response Message.....	6-473
2	6.7.2 Reverse Traffic Channel.....	6-476

1 GENERAL

1.1 Terms and Numeric Information

1.1.1 Terms

Abbreviated Alert. An abbreviated alert is used to remind the mobile station user that previously selected alternative routing features are still active.

AC. See Authentication Center.

Access Attempt. The entire process of sending one message and receiving (or failing to receive) an acknowledgment for that message, consisting of one or more access sub-attempts. See also Access Probe, Access Probe Sequence, and Access Sub-attempt.

Access Channel. A Reverse CDMA Channel used by mobile stations for communicating to the base station. The Access Channel is used for short signaling message exchanges such as call originations, responses to pages, and registrations. The Access Channel is a slotted random access channel.

Access Channel Message. The information part of an access probe consisting of the message body, length field, and CRC.

Access Channel Message Capsule. An Access Channel message plus the padding.

Access Channel Preamble. The preamble of an access probe consisting of a sequence of all-zero frames that is sent at the 4800 bps rate.

Access Channel Request Message. An Access Channel message that is autonomously generated by the mobile station. See also Access Channel Response Message.

Access Channel Response Message. A message on the Access Channel generated to reply to a message received from the base station.

Access Channel Slot. The assigned time interval for an access probe. An Access Channel slot consists of an integer number of frames. The transmission of an access probe is performed within the boundaries of an Access Channel slot.

Access Entry Handoff. The act of transferring reception of the Paging Channel from one base station to another, when the mobile station is transitioning from the *Mobile Station Idle State* to the *System Access State*.

Access Handoff. The act of transferring reception of the Paging Channel from one base station to another, when the mobile station is in the *System Access State* after an Access Attempt.

Access Overload Class. See Overload Class.

Access Probe. One Access Channel transmission consisting of a preamble and a message. The transmission is an integer number of frames in length and transmits one Access Channel message. See also Access Probe Sequence, Access Sub-attempt, and Access Attempt.

1 **Access Probe Handoff.** A handoff that occurs while the mobile station is performing an
2 Access Attempt in the *System Access State*.

3 **Access Probe Sequence.** A sequence of one or more access probes on the Access Channel.
4 Other than the reported pilot information, the same Access Channel message content is
5 transmitted in every access probe of an access sub-attempt. See also Access Probe, Access
6 Sub-attempt, and Access Attempt.

7 **Access Sub-attempt.** A sequence of one or more access probe sequences on the Access
8 Channel transmitted to one pilot, containing the same message content other than the
9 reported pilot information. See also Access Probe, Access Probe Sequence, and Access
10 Attempt.

11 **Acknowledgment.** A Layer 2 response by the mobile station or the base station confirming
12 that a signaling message was received correctly.

13 **Action Time.** The time at which the action implied by a message should take effect.

14 **Active Set.** The set of pilots associated with the CDMA Channels containing Forward
15 Traffic Channels assigned to a particular mobile station.

16 **Aging.** A mechanism through which the mobile station maintains in its Neighbor Set the
17 pilots that have been recently sent to it from the base station and the pilots whose handoff
18 drop timers have recently expired.

19 **A-key.** A secret, 64-bit pattern stored in the mobile station and HLR/AC. It is used to
20 generate/update the mobile station's Shared Secret Data.

21 **Analog Access Channel.** An analog control channel used by a mobile station to access a
22 system to obtain service.

23 **Analog Color Code.** An analog signal (see Supervisory Audio Tone) transmitted by a base
24 station on an analog voice channel and used to detect capture of a mobile station by an
25 interfering base station or the capture of a base station by an interfering mobile station.

26 **Analog Control Channel.** An analog channel used for the transmission of digital control
27 information from a base station to a mobile station or from a mobile station to a base
28 station.

29 **Analog Paging Channel.** A forward analog control channel that is used to page mobile
30 stations and send orders.

31 **Analog Voice Channel.** An analog channel on which a voice conversation occurs and on
32 which brief digital messages may be sent from a base station to a mobile station or from a
33 mobile station to a base station.

34 **Authentication.** A procedure used by a base station to validate a mobile station's identity.

35 **Authentication Center (AC).** An entity that manages the authentication information
36 related to the mobile station.

37 **Authentication Response (AUTHR).** An 18-bit output of the authentication algorithm. It
38 is used, for example, to validate mobile station registrations, originations and terminations.

- 1 **Autonomous Registration.** A method of registration in which the mobile station registers
2 without an explicit command from the base station.
- 3 **AWGN.** Additive White Gaussian Noise.
- 4 **Bad Frames.** Frames classified as insufficient frame quality or as 9600 bps primary traffic
5 only, with bit errors. See also Good Frames.
- 6 **Band Class.** A set of frequency channels and a numbering scheme for these channels.
- 7 **Base Station.** A fixed station used for communicating with mobile stations. Depending
8 upon the context, the term base station may refer to a cell, a sector within a cell, an MSC,
9 or other part of the cellular system. See also MSC.
- 10 **Base Station Authentication Response (AUTHBS).** An 18-bit pattern generated by the
11 authentication algorithm. AUTHBS is used to confirm the validity of base station orders to
12 update the Shared Secret Data.
- 13 **Base Station Random Variable (RANDBS).** A 32-bit random number generated by the
14 mobile station for authenticating base station orders to update the Shared Secret Data.
- 15 **BCH Code.** See Bose-Chaudhuri-Hocquenghem Code.
- 16 **Blank-and-Burst.** The preemption of an entire Traffic Channel frame's primary traffic by
17 signaling traffic or secondary traffic. Blank-and-burst is performed on a frame-by-frame
18 basis.
- 19 **Bose-Chaudhuri-Hocquenghem Code (BCH Code).** A large class of error-correcting cyclic
20 codes. For any positive integers m , $m \geq 3$, and $t < 2^{m-1}$, there is a binary BCH code with a
21 block length n equal to $2^m - 1$ and $n - k \leq mt$ parity check bits, where k is the number of
22 information bits. The BCH code has a minimum distance of at least $2t + 1$.
- 23 **bps.** Bits per second.
- 24 **Call Disconnect.** The process that releases the resources handling a particular call. The
25 disconnect process begins either when the mobile station user indicates the end of the call
26 by generating an on-hook condition or other call release mechanism, or when the base
27 station initiates a release.
- 28 **Call History Parameter (COUNT).** A modulo-64 event counter maintained by the mobile
29 station and Authentication Center that is used for clone detection.
- 30 **Candidate Frequency.** The frequency for which the base station specifies a search set,
31 using a *Candidate Frequency Search Request Message*.
- 32 **Candidate Set.** The set of pilots that have been received with sufficient strength by the
33 mobile station to be successfully demodulated, but have not been placed in the Active Set
34 by the base station. See also Active Set, Neighbor Set, and Remaining Set.
- 35 **CDMA.** See Code Division Multiple Access.
- 36 **CDMA Candidate Frequency.** The Candidate Frequency specified for a search of CDMA
37 pilots.
- 38 **CDMA Cellular System.** The entire system supporting Domestic Public Cellular Service
39 operation as embraced by this Standard.

1 **CDMA Channel.** The set of channels transmitted between the base station and the mobile
2 stations within a given CDMA frequency assignment. See also Forward CDMA Channel and
3 Reverse CDMA Channel.

4 **CDMA Channel Number.** An 11-bit number corresponding to the center of the CDMA
5 frequency assignment.

6 **CDMA Frequency Assignment.** A 1.23 MHz segment of spectrum. For CDMA cellular
7 systems, the channel is centered on one of the 30 kHz channels of the existing analog
8 cellular system. For CDMA PCS systems, the channel is centered on one of the 50 kHz
9 channels.

10 **CDMA PCS System.** The entire system supporting Personal Communications Services as
11 embraced by this Standard.

12 **CDMA Preferred Set.** The set of CDMA channel numbers in a CDMA system
13 corresponding to frequency assignments that a mobile station will normally search to
14 acquire a CDMA Pilot Channel. For CDMA cellular systems, the primary and secondary
15 channels comprise the CDMA Preferred Set.

16 **Code Channel.** A subchannel of a Forward CDMA Channel. A Forward CDMA Channel
17 contains 64 code channels. Code channel zero is assigned to the Pilot Channel. Code
18 channels 1 through 7 may be assigned to the either Paging Channels or the Traffic
19 Channels. Code channel 32 may be assigned to either a Sync Channel or a Traffic
20 Channel. The remaining code channels may be assigned to Traffic Channels.

21 **Code Division Multiple Access (CDMA).** A technique for spread-spectrum multiple-access
22 digital communications that creates channels through the use of unique code sequences.

23 **Code Symbol.** The output of an error-correcting encoder. Information bits are input to the
24 encoder and code symbols are output from the encoder. See Convolutional Code.

25 **Continuous Transmission.** A mode of operation in which Discontinuous Transmission is
26 not permitted.

27 **Control Mobile Attenuation Code (CMAC).** A 3-bit field in the Control-Filler Message that
28 specifies the maximum authorized power level for a mobile transmitting on an analog
29 reverse control channel.

30 **Convolutional Code.** A type of error-correcting code. A code symbol can be considered as
31 the convolution of the input data sequence with the impulse response of a generator
32 function.

33 **CRC.** See Cyclic Redundancy Code.

34 **Cyclic Redundancy Code (CRC).** A class of linear error detecting codes which generate
35 parity check bits by finding the remainder of a polynomial division. See also Frame Quality
36 Indicator.

37 **Data Block.** A unit of data transmitted by the mobile/base station. For Multiplex Options
38 1 and 2, one data block is transmitted by the mobile/base station every 20 ms. For
39 Multiplex Options $2n - 1$, $n = 2$ through 8, at least one data block, and at most n data
40 blocks, are transmitted by the mobile/base station every 20 ms. For Multiplex Options $2n$,

1 $n = 2$ through 8, at least one data block, and at most n data blocks, may be transmitted by
 2 the mobile/base station every 20 ms.

3 **Data Burst Randomizer.** The function that determines which power control groups within
 4 a frame are transmitted on the Reverse Traffic Channel when the data rate is lower than
 5 the maximum rate for the rate set. The data burst randomizer determines, for each mobile
 6 station, the pseudorandom position of the transmitted power control groups in the frame
 7 while guaranteeing that every modulation symbol is transmitted exactly once.

8 **dBc.** The ratio (in dB) of the sideband power of a signal, measured in a given bandwidth at
 9 a given frequency offset from the center frequency of the same signal, to the total inband
 10 power of the signal. For CDMA, the total inband power of the signal is measured in a 1.23
 11 MHz bandwidth around the center frequency of the CDMA signal.

12 **dBm.** A measure of power expressed in terms of its ratio (in dB) to one milliwatt.

13 **dBm/Hz.** A measure of power spectral density. The ratio, dBm/Hz, is the power in one
 14 Hertz of bandwidth, where power is expressed in units of dBm.

15 **dBW.** A measure of power expressed in terms of its ratio (in dB) to one Watt.

16 **Dedicated Control Channel.** An analog control channel used for the transmission of
 17 digital control information from either a base station or a mobile station.

18 **Deinterleaving.** The process of unpermuting the symbols that were permuted by the
 19 interleaver. Deinterleaving is performed on received symbols prior to decoding.

20 **Digital Color Code (DCC).** A digital signal transmitted by a base station on a forward
 21 analog control channel that is used to detect capture of a base station by an interfering
 22 mobile station.

23 **Dim-and-Burst.** A frame in which primary traffic is multiplexed with secondary, signaling,
 24 or secondary and signaling traffic.

25 **Discontinuous Transmission (DTX).** A mode of operation in which a mobile station
 26 transmitter autonomously switches between two transmitter power levels while the mobile
 27 station is in the conversation state on an analog voice channel.

28 **Distance-Based Registration.** An autonomous registration method in which the mobile
 29 station registers whenever it enters a cell whose distance from the cell in which the mobile
 30 station last registered exceeds a given threshold.

31 **DTMF.** See Dual-Tone Multifrequency.

32 **Dual-Tone Multifrequency (DTMF).** Signaling by the simultaneous transmission of two
 33 tones, one from a group of low frequencies and another from a group of high frequencies.
 34 Each group of frequencies consists of four frequencies.

35 **E_b .** The energy of an information bit.

36 **E_c/I_0 .** The ratio (in dB) between the pilot energy accumulated over one PN chip period (E_c)
 37 to the total power spectral density (I_0) in the received bandwidth.

38 **Effective Isotropically Radiated Power (EIRP).** The product of the power supplied to the
 39 antenna and the antenna gain in a direction relative to an isotropic antenna.

1 **Effective Radiated Power (ERP).** The product of the power supplied to the antenna and
2 its gain relative to a half-wave dipole in a given direction.

3 **EIRP.** See Effective Isotropic Radiated Power.

4 **Electronic Serial Number (ESN).** A 32-bit number assigned by the mobile station
5 manufacturer, uniquely identifying the mobile station equipment.

6 **Encoder Tail Bits.** A fixed sequence of bits added to the end of a block of data to reset the
7 convolutional encoder to a known state.

8 **Erase Indicator Bit.** A bit used in the Rate Set 2 Reverse Traffic Channel frame
9 structure to indicate an erased Forward Fundamental Code Channel frame.

10 **ERP.** See Effective Radiated Power.

11 **ESN.** See Electronic Serial Number.

12 **Extended Protocol.** An optional expansion of the signaling messages between the base
13 station and mobile station to allow for the addition of new system features and operational
14 capabilities.

15 **Fade Timer.** A timer kept by the mobile station as a measure of Forward Traffic Channel
16 continuity. If the fade timer expires, the mobile station drops the call.

17 **Flash.** An indication sent on an analog voice channel or CDMA Traffic Channel indicating
18 that the user directed the mobile station to invoke special processing.

19 **Foreign NID Roamer.** A mobile station operating in the same system (SID) but a different
20 network (NID) from the one in which service was subscribed. See also Foreign SID Roamer
21 and Roamer.

22 **Foreign SID Roamer.** A mobile station operating in a system (SID) other than the one
23 from which service was subscribed. See also Foreign NID Roamer and Roamer.

24 **Forward Analog Control Channel (FOCC).** An analog control channel used from a base
25 station to a mobile station.

26 **Forward Analog Voice Channel (FVC).** An analog voice channel used from a base station
27 to a mobile station.

28 **Forward CDMA Channel.** A CDMA Channel from a base station to mobile stations. The
29 Forward CDMA Channel contains one or more code channels that are transmitted on a
30 CDMA frequency assignment using a particular pilot PN offset. The code channels are
31 associated with the Pilot Channel, Sync Channel, Paging Channels, and Traffic Channels.
32 The Forward CDMA Channel always carries a Pilot Channel and may carry up to one Sync
33 Channel, up to seven Paging Channels, and up to 63 Traffic Channels, as long as the total
34 number of channels, including the Pilot Channel, is no greater than 64.

35 **Forward Fundamental Code Channel.** A Fundamental Code Channel which is
36 transmitted on the Forward CDMA Channel.

37 **Forward Supplemental Code Channel.** A Supplemental Code Channel which is
38 transmitted on the Forward CDMA Channel.

- 1 **Forward Traffic Channel.** One or more code channels used to transport user and
 2 signaling traffic from the base station to the mobile station. See Forward Fundamental
 3 Code Channel and Forward Supplemental Code Channel.
- 4 **Frame.** A basic timing interval in the system. For the Access Channel, Paging Channel,
 5 and Traffic Channel, a frame is 20 ms long. For the Sync Channel, a frame is 26.666... ms
 6 long.
- 7 **Frame Category.** A classification of a received Traffic Channel frame based upon
 8 transmission data rate, the frame contents (primary traffic, secondary traffic, or signaling
 9 traffic), and whether there are detected errors in the frame.
- 10 **Frame Offset.** A time skewing of Traffic Channel frames from System Time in integer
 11 multiples of 1.25 ms. The maximum frame offset is 18.75 ms.
- 12 **Frame Quality Indicator.** The CRC check applied to 9.6 and 4.8 kbps Traffic Channel
 13 frames (for Rate Set 1) and 14.4, 7.2, 3.6 and 1.8 kbps Traffic Channel frames (for Rate Set
 14 2).
- 15 **Full TMSI.** The combination of TMSI_ZONE and TMSI_CODE. The full TMSI is a globally
 16 unique address for the mobile station.
- 17 **Fundamental Code Channel.** A portion of a Traffic Channel (Forward or Reverse) which is
 18 always present, and which carries a combination of primary data, secondary data,
 19 signaling, and power control information.
- 20 **Fundamental Data Block.** A data block that is transmitted by the mobile/base station in
 21 every 20 ms time interval on the Fundamental Code Channel.
- 22 **GHz.** Gigahertz (10^9 Hertz).
- 23 **Global Positioning System (GPS).** A US government satellite system that provides
 24 location and time information to users. See Navstar GPS Space Segment / Navigation User
 25 Interfaces ICD-GPS-200 for specifications.
- 26 **Good Frames.** Frames not classified as bad frames. See also Bad Frames.
- 27 **GPS.** See Global Positioning System.
- 28 **Half Frame.** A 10 ms interval on the Paging Channel. Two half frames comprise a frame.
 29 The first half frame begins at the same time as the frame.
- 30 **Handoff.** The act of transferring communication with a mobile station from one base
 31 station to another.
- 32 **Hard Handoff.** A handoff characterized by a temporary disconnection of the Traffic
 33 Channel. Hard handoffs occur when the mobile station is transferred between disjoint
 34 Active Sets, the CDMA frequency assignment changes, the frame offset changes, or the
 35 mobile station is directed from a CDMA Traffic Channel to an analog voice channel. See
 36 also Soft Handoff.
- 37 **Hash Function.** A function used by the mobile station to select one out of N available
 38 resources. The hash function distributes the available resources uniformly among a
 39 random sample of mobile stations.

- 1 • *Conversation Substate* - In this substate, the base station exchanges Traffic Channel
- 2 frames with the mobile station in accordance with the current service configuration.
- 3 • *Release Substate* - In this substate, the base station disconnects the call.

4 7.6.4.1 Special Functions and Actions

5 The base station performs the following special functions and actions in one or more of the
6 Traffic Channel processing substates:

7 7.6.4.1.1 Forward Traffic Channel Power Control

8 When the base station enables Forward Traffic Channel power control, the mobile station
9 reports frame error rate statistics to the base station using the *Power Measurement Report*
10 *Message*.

11 The base station may enable Forward Traffic Channel power control using the *System*
12 *Parameters Message* sent on the Paging Channel and the *Power Control Parameters*
13 *Message* sent on the Forward Traffic Channel. The base station may enable periodic
14 reporting which causes the mobile station to report frame error rate statistics at specified
15 intervals. The base station may also enable threshold reporting which causes the mobile
16 station to report frame error rate statistics when the frame error rate reaches a specified
17 threshold.⁹

18 The base station may use the reported frame error rate statistics to adjust the transmit
19 power of the Forward Traffic Channel.

20 7.6.4.1.2 Service Configuration and Negotiation

21 During Traffic Channel operation, the mobile station and base station communicate
22 through the exchange of Forward and Reverse Traffic Channel frames. The mobile station
23 and base station use a common set of attributes for building and interpreting Traffic
24 Channel frames. This set of attributes, referred to as a service configuration, consists of
25 the following:

- 26 1. Forward and Reverse Multiplex Options: These control the way in which the
- 27 information bits of the Forward and Reverse Traffic Channel frames, respectively,
- 28 are divided into various types of traffic, such as signaling traffic, primary traffic and
- 29 secondary traffic. Associated with each multiplex option is a rate set which specifies
- 30 the frame structures and transmission rates supported by the multiplex option (see,
- 31 for example, 6.1.3.3.11). Multiplex Options 3 through 16 also indicate the
- 32 capability for supporting Supplemental Code channel transmission on the Forward
- 33 and Reverse Traffic Channels. Invocation of Supplemental Code Channel operation
- 34 on the Forward or Reverse Traffic Channels occurs by the *Supplemental Channel*
- 35 *Request Message*, the *Supplemental Channel Assignment Message*, and the *General*
- 36 *Handoff Direction Message*. The multiplex option used for the Forward Traffic

⁹ Both periodic and threshold reporting may be enabled, either one of the forms of reporting may be enabled, or both forms of reporting may be disabled via the *System Parameters Message* on the Paging Channel or the *Power Control Parameters Message* on the Forward Traffic Channel.
